

PatentClaw: Secure Local Agentic AI for Patent Law Firms with OpenClaw

*One person. One agent. Trusted, Confidential Local AI.
Define boundaries. Delegate limited authority. Audit outcomes.*

Tom Plunkett • tom.plunkett@colorado.edu

Powerful agentic AI requires human responsibility.

RESEARCH QUESTION

Can local agentic AI support the patent law firms of the future while keeping client data confidential?

TECHNICAL ARCHITECTURE

ONE PERSON / ONE AGENT	identity • credentials • approvals
ISOLATED PATENTCLAW AGENT	session • workspace • tools • audit trail
OPENCLAW GATEWAY	authentication • routing • tool permissions • sandboxing
LOCAL AI RUNTIME	Ollama • open-source models • embeddings • RAG
HP ZGX NANO AI STATION • LINUX	confidential local data and execution with NVIDIA GB10 GPU

SECURITY MODEL

The agent operates inside a bounded trust zone.
